

imile document.

SOLUTION: In a communication terminal equipment used as a facsimile equipment in common and capable of receiving an electronic mail, at the time of receiving, CPU built in an equipment T judges whether an electronic mail or a facsimile document is received. When the equipment T receives an electronic mail, the mail is recorded on an A4-form white recording paper PP1 housed in a first paper cassette C1 to be ejected to a first paper ejection tray t1. At the time of receiving a facsimile document, the document is recorded on a B4-form brown recording paper PP2 housed in a second paper cassette C2 to be ejected to a second paper ejection tray t2.
